The image shows a technical drawing of a wooden barrel. The barrel is cylindrical with a slightly domed top. It is constructed from vertical staves held together by two horizontal hoops. Each hoop has several circular rivets or bolts. The drawing uses solid lines for the barrel's structure and dashed lines to indicate the measurement boundaries. On the left side, a vertical dimension line with dashed horizontal end-caps indicates the height of the barrel. At the bottom, a horizontal dimension line with dashed vertical end-caps indicates the diameter of the barrel.
